The Benefits of Massage

Bodywork Goes Beyond Relaxation

As you lie on the table under crisp, fresh sheets, hushed music draws you into the moment. The smell of sage fills the air and you hear the gentle sound of massage oil being warmed in your therapist's hands. Once the session gets underway, the daily stressors and aching muscles fade into an oblivious 60 minutes of relief, and all you can comprehend right now is not wanting it to end.

But what if that hour of massage did more for you than just take the pressures of the day away? What if that gentle, Swedish massage helped you combat cancer? What if bodywork helped you recover from a strained hamstring in half the time? What if your sleep, cultures. Touching is a natural human reaction to pain and stress, and for conveying compassion and support. When you bump your head or have a sore calf, the natural response is to rub it to feel better. The same was true of our earliest ancestors.

Healers throughout time and throughout the world have instinctually and independently developed a wide range of therapeutic techniques using touch. Many are still in use today, and with good reason. We now have scientific proof of the benefits of massage —benefits ranging from treating chronic diseases and injuries to alleviating the growing tensions of our modern lifestyles. Having a massage does more

Healing is a matter of time, but it is sometimes also a matter of opportunity.

Along with easing stress -- the No. 1 cause of disease -- massage has a long list of benefits.

digestion, and mood all improved with massage and bodywork? What if these weren't just "what if's"?

Evidence is showing that the more massage you can allow yourself, the better you'll feel. Here's why:

Massage as a healing tool has been around for thousands of years in many

than just relax your body and mind -there are specific physiological and
psychological changes that occur, and
even more so when massage is utilized as
a preventative, frequent therapy and not
simply mere luxury. Massage not only
feels good, but it can cure what ails you.

The Fallout of Stress

Experts estimate that 80 percent to 90 percent of disease is stress-related. Massage and bodywork is there to combat that frightening number by helping us remember what it means to relax. The physical changes massage brings to your body can have a positive effect in many areas of your life. Besides increasing relaxation and decreasing anxiety, massage lowers blood pressure, increases circulation, improves injury recovery, encourages deep sleep, and increases concentration. It reduces fatigue and gives you more energy to handle stressful situations.

Massage is a perfect elixir for good health, but it can also provide an integration of body and mind. By producing a meditative state or heightened awareness of the present moment, massage can provide emotional and spiritual balance, bringing with it true relaxation and peace.

The incredible benefits of massage are doubly powerful if taken in regular "doses." Researchers from the Touch Research Institute (TRI) at the University of Miami, found that recipients of massage can benefit even in small doses (15 minutes of chair massage or a half-hour table session). They also note that receiving bodywork two to three times a week is even more beneficial. While this may not be feasible, it's nice to know that this "medicine" only gets better with frequency.

What It Does

In an age of technical and, at times, impersonal medicine, massage offers a drug-free, non-invasive, and humanistic approach based on the body's natural ability to heal itself. Following is a brief list of the many known, research-based benefits of massage and bodywork:

- Increases circulation, allowing the body to pump more oxygen and nutrients into tissues and vital organs;
- Stimulates the flow of lymph, the body's natural defense system, against toxic invaders. For example, in breast cancer patients, massage has been shown to increase the cells that fight cancer.

Furthermore, increased circulation of blood and lymph systems improves the condition of the body's largest organ -- the skin;

- Relaxes and softens injured and overused muscles;
- Reduces spasms and cramping;
- Increases joint flexibility;
- Reduces recovery time and helps prepare the body for strenuous workouts, reducing subsequent muscle pain of athletes at any level;
- Releases endorphins -- the body's natural painkiller -- and is proving very beneficial in patients with chronic illness, injury, and post-op pain;
- Reduces post-surgery adhesions and edema and can be used to reduce and

realign scar tissue after healing has occurred:

- Improves range-of-motion and decreases discomfort for patients with low back pain;
- Relieves pain for migraine sufferers and decreases the need for medication;
- Provides exercise and stretching for atrophied muscles and reduces shortening of the muscles for those with restricted range of motion;
- Assists with shorter labor for expectant mothers, as well as reduces the need for medication, eases postpartum depression and anxiety, and contributes to a shorter hospital stay.

The benefits of massage are diverse. No matter how great it feels, massage isn't just a luxury; it's a health necessity.

To get the full benefits of massage, take it easy after your session and let it soak in.

Prevent the Afternoon Slump

Some Tips for P.M. Energy

Jerry V. Teplitz

If you're like most people, you've experienced the afternoon slump. You know the feeling -- it's only 2 p.m., yet you feel drained. Fortunately, you can employ methods to reduce the slump's frequency and shorten its duration.

Drink water.

Your body uses water even if you're not exercising. If you wait until you feel thirsty, you're already dehydrated. Keep a water bottle handy all day.

Avoid sugar and simple carbohydrates. While a mid-afternoon candy bar may give you a quick rush, it actually worsens the slump. Instead, choose protein-rich foods and complex carbs.

EAT SMALL MEALS.

Have six small meals over the course of the day instead of three large ones. Big meals cause the digestive process to divert blood from your brain to use in the digestive track.

Evaluate your lighting.

Most offices are lit with cool, white

fluorescent tubes, which have a terrible effect on how people feel and function at work. A better option is full-spectrum, fluorescent tubes.

Take time for walks.

Walking gets your blood circulating, helps you breathe better, and stimulates your brain due to the increased blood flow. Take a 5- or IO-minute walk during the day.

MEDITATE.

Meditation is great for rejuvenating your body. By meditating for 15 to 20 minutes twice a day, you're keeping your body continually energized and rested.

Take time to breathe and stretch.

Deep breathing exercises give you an energy boost. Also, stand up and stretch to increase blood flow and stimulate the lymphatic system.

HANDLE NEGATIVITY.

Negative people and images can have a draining effect on your energy. Make a conscious effort to stay positive.

Avoid the drain office settings can bring on.

Easing Holiday Angst

Five Stress Busters for a Joyous Season

You enter the holiday season with the best of intentions -- looking forward to time spent with family and friends, decorating, shopping, baking. But as soon as you pile holiday activities on top of an already busy life, you're likely to find yourself relating more to Ebineezer Scrooge than Martha Stewart.

Consider these five suggestions to keep holiday stress at bay:

1. Determine a Shopping Budget

For many, gift giving is an important part of the holidays, serving as a way to express love and appreciation for friends and family. But when the credit card bills arrive in January, you may discover you've extended your holiday stress well into the New Year. Plan your budget in

advance, determine what you can spend, and stick to the plan.

2. Create a Time Budget

Many will make a shopping budget, but what about making a time budget? Before accepting every invitation this year, decide ahead how many parties you can and want to attend while maintaining your sanity. Make choices about your time commitments based on what you'd really like to do this year, rather than what you think you should do or what you've always done. Don't forget to leave time for yourself.

3. Set Food-Intake Boundaries

You'll likely be tempted to eat in excess, and don't be too hard on yourself if you don't stick to your pre-holiday eating

standards. But do decide ahead of time just how much you'll deviate from your eating routine.

4. STICK TO YOUR EXERCISE REGIMEN Regular exercise is a powerful stress buster. You'll feel better, sleep better, avoid weight gain, boost your immune system, and maintain a positive outlook about yourself. While it may seem like an easy time concession to make, don't give in to the idea. Stick to exercise, and

5. Take Time to Rest

you'll thank yourself for it.

Take time from your schedule to honor the cycles of the season. The holidays fall during winter solstice -- the shortest day of the year. Learn from nature, and get plenty of rest.

Whatever words we utter should be chosen with care, for people will hear them and be influenced by them, for good or ill.

Every day brings a choice: to practice stress or to practice peace. -Joan Borysenko, biologist, psychologist, and spiritual educator

Massage can help you practice peace. Massage is not only effective in decreasing muscle pain but lowers blood pressure and elevates mood.

Schedule your massage today.
